

# What's Up, Doc? †

## December 2022

Aaron B. Clevenson, Observatory Director, Insperity Observatory

This document tells you what objects are visible this next month for many of the Astronomical League Observing Programs. If you are working on one of the more advanced observing programs, then I assume that you are also probably tracking where your objects are all the time. I concentrate on the more common and starter level programs. This information is based on 9 PM Central Time.

## Other Observing Programs (continued)

**Planetary** – These are the tasks that can be done this month:

Ceres, the Dwarf Planet, is not visible in the evening sky.

Sun – Any clear day is a good time to get those sunspots. Sunset is 1723 at mid-month.

Moon: The Maria requirement can be done any time the moon is visible. Look after 12/30 and before 12/16 for the best views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 12/30 and 12/31.

The Scarps requirement is best done on 12/1 and 12/31.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Mercury is in Sagittarius and sets at 1836 ST mid-month.

Venus is in Sagittarius and sets at 1813 ST mid-month.

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid. See above to identify the bright ones this month.
