

What's Up, Doc? †

April 2023

Dr. Aaron B. Clevenson, Director, Insuperity Observatory

This document tells you what objects are visible this next month for many of the Astronomical League Clubs. If you are working on an advanced club, then I assume that you are tracking where your objects are all the time. I have concentrated on the common and starter level clubs. This information is based on 9 PM **Central** Daylight Time for **Houston, Texas**.

Other Clubs (of the Solar System)

Planetary – These are the tasks that can be done this month:

The Sun is in Pisces and sets at **1948** mid-month.

Jupiter, Saturn, Neptune, and Pluto will not be visible during the evening hours. They are all too close to the sun or morning stars.

Sun – Any clear day is a good time to get those sunspots. But things have been rather sparse.

Moon:

The Maria requirement can be done any time the moon is visible. Look before 4/12 and after 4/26 for the fullest views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 4/25 and 4/26.

The Scarps requirement is best done on 4/27.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid. See above to identify the bright ones this month.

Mercury is in Aries and sets at **2113** mid-month.

Venus is in Taurus and sets at **2254** mid-month.

Mars is in Gemini and is up all evening mid-month.

Uranus is in Aries and sets at **2125** mid-month.
