May 2023

Dr. Aaron B. Clevenson, Director, Insperity Observatory

If you are working on one of the more advanced clubs, then I assume that you are tracking where your objects are all the time. I have concentrated on the common and starter level Observing Programs. This information is based on 9 PM **Eastern** Time.

Other Clubs (of the Solar System)

Planetary – These are the tasks that can be done this month:

Mercury, Jupiter, Saturn, Uranus, Neptune, and Pluto will not be visible during the evening hours. Sun is in Taurus and sets at 2014 mid-month. Any clear day is a good time to get sunspots.

Moon:

The Maria requirement can be done any time the moon is visible. Look before 5/12 and after 5/26 for the fullest views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 5/25 or 5/26.

The Scarps requirement is best done on 5/27.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Venus is in Gemini and is up all evening mid-month.

Mars is in Gemini and is up all evening mid-month.

Ceres is in Leo and is up all evening mid-month.

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid. See above to identify the bright ones this month.
