

Explore the moon!

The best evening in December 2024 to view this area of the moon is the 10th. What do you see?

Bavarian observer Franz von Paula Gruithusien was an early proponent of the belief that meteor impacts formed lunar craters. He is also remembered for seeing something in 1822 in Sinus Aestrium that was very remarkable. He, with later confirmation by other observers, claimed that he saw...

- A. a large, walled city.
- B. a large reservoir.
- C. a volcanic eruption.
- D. a meteor strike followed by a resulting crater.
