

Authentic Observing Experience:

M10

Wide field, low power eyepiece view

If you wonder why someone is excited to have a chance at the eyepiece, try visualizing what they will experience and what they will see. After all, an eyepiece view of a celestial wonder is much different than looking at an astro-image. **It is active. It is personal. It is real.**

Hold this screen as close to you as you can while still seeing a focused image.

**Witnessing scenes like this is one reason why we do what we do.
This is one aspect of the Authentic Observing Experience.**
